Sir:

In response to the first Office action (Paper No. 09062003) dated 16 September 2003, the applicant respectfully requests re-examination, reconsideration, and entry of the following remarks and amendments.

Folio: P56289  
Date: 11/28/03

**AMENDMENTS TO THE SPECIFICATION**

Please amend the title, as follows:

**CATHODE MATERIAL INCLUDING RARE EARTH METAL USED AS ELECTRON  
EMISSION SOURCE FOR ELECTRON BEAM APPARATUS**

Please amend paragraphs [0006] through [0008], [0011], [0023] and [0024], as follows:

[0006] For instance, a metal cathode based on lanthanum lanthanum hexaboride( $\text{LaB}_6$ ) is known to have a higher degree of strength and electron emission power compared to oxide cathodes, and a single crystal cathode can emit a higher electron current density on the order of  $10 \text{ A/cm}^2$ . However, the lanthanum lanthanum hexaboride cathode has a short lifetime, and thus it has been used only partially in a vacuum electronic apparatus whose cathode unit can be replaced. The reason that the lanthanum lanthanum hexaboride cathode has a short lifetime is due to high reactivity with the components of a heater, and to the fact that lanthanum lanthanum hexaboride is in contact with the components of the heater, e.g. tungsten, to form fragile compounds.
